

Below is a list of the URL templates that can now be utilized to link to different locations within LOIS. We added links to the advanced search pages and specific pages within each record. Replace the items in **<red>** with information pertaining to the user to create your links. You can locate the record and page numbers by opening a record on the Administration web site to view the record id and page number in the browser address bar.

As an example, if your username was "Iowa" and you wanted to link to the demographics page of Des Moines (MSA), IA, you would create the following link:

http://www.locationone.com/lois/logon.do?username=iowa&appsection=metros&metro_id=2120&page=2
